SUMMARY

1. INTRODUCTION

Task 1.2 of the Intemrin Project aimed at mapping relevant data about raw materials education projects worldwide. This task was mainly performed with an online survey (see also D1.2). D1.3 is per definition of the proposal a "Global repository of training prorams omn raw materials in the EU and advance mining countries". It should be delivered as a web-interface, interlinked with all kinds of relevant data.

2. WEB INTERFACE AND CONTENT

As also described in D1.2 the web-interface can be found under http://interminproject.org/preliminary-survey-results/. The users can interact with this interface, click on different icons and browse through the content. Fig. 1 shows the general layout of this interface. By e.g. clicking on one teaching language, all relevant programmes which are offered in this language can be displayed (Fig. 2 gives an example for Arabic language). In this way the users can scroll through all relevant content and compile an evaluation / output in their own interest.
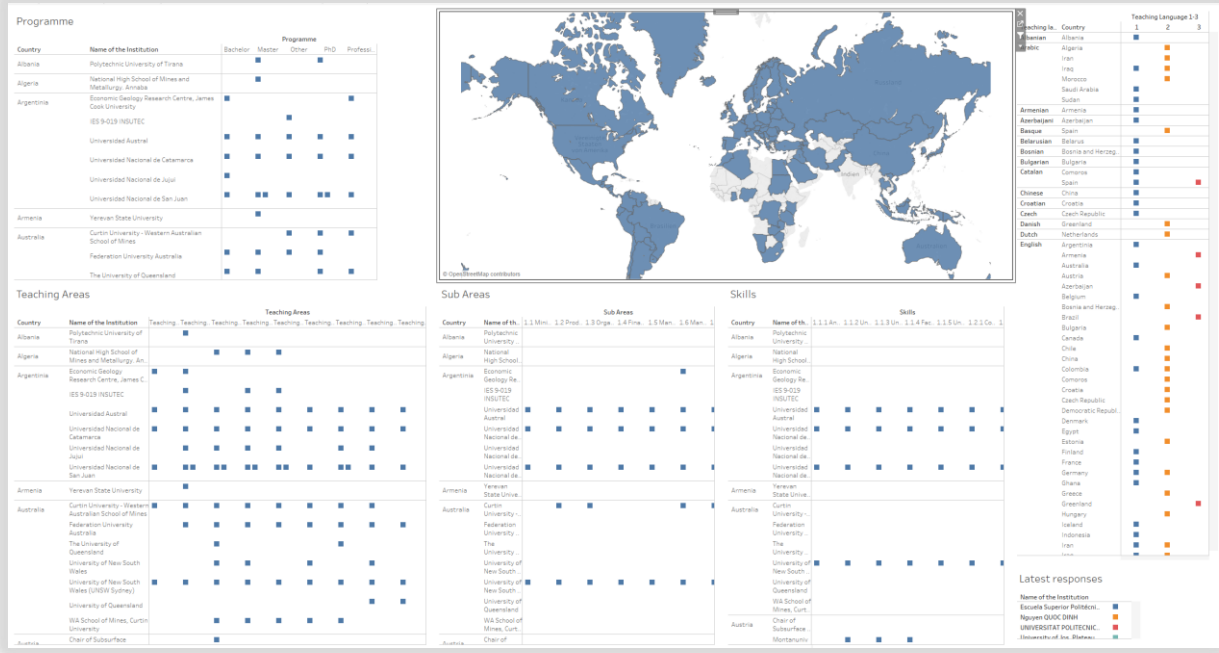

*Fig. 1: Overview of the Tableau Dashbord used for data visualisation.*

Fig. 2: Example of displying all programmes in Arabic language.

The proposal specifies the content of this database and interface. Due to practical reasons when performing the survey not all of the points could be filled. Mainly, we ranked the contents based on their importance for the project and balanced the effort it would take for the provider of the data with the available time frame. We wanted to keep the survey as short as possible, so that people would not lose their interst in providing the data, but as conclusive as possible, so that

we can perform the tasks promised in the proospal. These types of dat have been promised / provided:

Information	Status
Geopgraphical information	YES
Strengths and Weaknesses of programmes	Not possible.
Protagonists	YES, but not publically disclosed due to concerns about privacy. Data mainly available for quality control and feedback.
Language(s)	YES
Conent and Overlap	YES
Number of participants	Was not collected. Effort was not in balance with importance for project
Target audience	YES
Duration and Workload	Was not collected. Effort was not in balance with importance for project. Too many differnet sub-categories.
Skills developed	YES
Nature of Classes	We asked for entire programmes and skills, not for spec. classes. Most programmes will have mix of practical and.theroretical classes.

The survey (https://intermin.limequery.com/324595?lang=en) will remain open at least until September 2019. All relevant institutions which are not yet represented in the database still have time to interact and provide content as well as updates. In fact, we are still pushing hard to increase amount of repsonses to an even higher level.

The raw data of the survey results are available as a xlsx-file, either on the Intermin-Intranet, or upon personal request.
